SUMMARY

Game developer focused on XR and real-time training simulations, working at Varjo and studying Game Development at Metropolia. Co-founder of Jumatech Interactive, where we built the SnipeZone hockey simulator with camera-based puck tracking, now in use in Finland and Germany, and are developing Korsu, a VR game for the Varjo XR-4. Experience with multiplayer, leading a team project and testing XR applications. Working with Unreal Engine 5 and C++ in personal and school projects.

WORK EXPERIENCE

Co-founder & Unity Developer – Jumatech Interactive Oy — Dec 2025 – Present

- Co-founded a 3-person team building interactive applications and simulations for clients.
- Now developing Korsu, a Winter War VR game, using the Varjo XR-4 for development and testing.
- Implementing gameplay features, UI and overall system functionality.

QA / Hardware & Compatibility Tester – Varjo Technologies — Sep 2025 – Present

- Testing Varjo XR headsets across different PC environments, software setups and applications.
- Evaluating real-time performance, compatibility, usability and user experience in immersive systems.

Technical Support Intern – Varjo Technologies — Apr – Aug 2025

- Refurbishing and testing returned XR headsets, investigating hardware faults.
- Small repairs and component replacement, such as displays and other parts.

Game Programmer Intern – Tutors Finland, Spain — May – Jul 2022

- Continued a sports game started by a previous team; independent gameplay programming in Unity and C#.

Earlier (2011–2019): technical and operational roles – CNC machinist, sewer specialist, airport security.

SELECTED PROJECTS

SnipeZone Hockey Simulator – client project — Unity · C# · Hardware integration

- Real-time training simulator that reacts to real shots: built the Unity side on top of our Finnish Pipo Hockey codebase and integrated camera-based puck tracking.
- Training scenarios, goalie options and shot/accuracy tracking. In use in Finland (Karjaa) and Germany (Berlin).

Finnish Pipo Hockey – multiplayer game, team of 3 — Unity · C# · Blender

- Online hockey game with a dedicated server. Built the lobby system, game rules, scoring and goal detection.
- The working multiplayer game became the foundation for the SnipeZone simulator.

Dark Rooms – Lead Programmer & Project Manager, team of 5 — Unity · C#

- Led the project and team; programmed player movement, interaction, puzzle systems, level scripting and VFX.

Cat Café Management – mobile game, team of 8 — Unity · C# · Android

- Café management prototype built in 8 weeks. Programmed kitchen, order queue, delivery and payment systems.

Unreal Engine Stealth Game & MetaHuman Face Capture — Unreal Engine 5 · Blueprints · Live Link

- Stealth game with takedowns, climbing, patrolling AI with alarms, MetaHumans and a leaderboard.
- Real-time facial capture pipeline: iPhone Live Link Face driving a MetaHuman in UE5.

Chess Game & AI Bot – team of 2 — C++ · SFML

- Full chess rules and an AI opponent using alpha-beta pruning, with multithreaded move evaluation.

SKILLS

Languages	C# (primary), C++, Python, JavaScript	**Engines**	Unity (primary), Unreal Engine 5, Godot
QA & Testing	XR compatibility testing, bug reporting, playtesting	**Multiplayer**	Dedicated server, Photon
3D & Art	Blender, MetaHuman, Krita, GIMP	**Tools**	Git, Plastic SCM, Visual Studio, Claude Code

EDUCATION

B.Eng. in ICT – Game Development — 2024 – Present
Metropolia University of Applied Sciences

Vocational Qualification in ICT — 2021 – 2023
Game Programming – Taitotalo

CERTIFICATES

Unity Junior Programmer – Unity (2024)
Unity Essentials – Unity (2024)
